

# Help your teams achieve more with Vidcast

With Vidcast, your users can easily create video messages to share with teammates or customers.

Give your users the freedom to collaborate and communicate on their schedule. Unlock the benefits of async work and help your teams achieve more:

- **Free up the calendar**—Share team updates or create how-to videos that can be shared time and time again—all without a meeting.
- **Avoid scheduling stress**—Have team members across different time zones? Record a Vidcast on your schedule and allow others to watch it on theirs.
- **Keep it polished and professional**—Easily trim your video, update the title, add a description, and even add chapters for easy navigation.

As an administrator, you can manage access controls for Vidcast at both a user and group level in Control Hub. These access controls determine who can access Vidcast, who can record Vidcasts, and who can upload Webex Meeting recordings to Vidcast.

Time to roll out? Once you've got your Vidcast controls ready to go for your users, share our adoption materials, so that they can get to know Vidcast.
