

Elevate your Teams with native integration of Webex Calling

Your Microsoft Teams users now have access to a robust Webex Calling experience through our seamless integration.

Enhance your voice and video calling

Webex Calling integration with Teams provides users with a proven, reliable, enterprise calling experience directly within their Teams interface. With best-in-class noise removal technology, your callers can communicate clearly.

Seamless integration simplifies the workday

With a single click from within the Teams interface, users have access to Webex Calling features like mid-call control, voicemail, call history, and directory search. Users can reduce the number of apps they're using and streamline their calling and collaboration experience.

- **Connect quicker:** Add and manage speed dials. View recent calls and call back with just a click.
- **Easily access voicemails:** Play back messages directly within the Teams interface.
- **Access call settings:** Manage all your Webex Calling settings directly from Teams.
- **Call a channel member:** No need to switch to a direct chat first.

Streamline the experience

Before you roll out, install Webex Calling as the default calling option for all users in your organization. With the Teams calling option disabled, everyone in the organization uses the same platform to make and receive calls. As an admin, you can choose to hide the Webex App window from users of the Webex Calling integration within Teams.
